

FIRST MEETING

MONDAY, JUNE 12
1 - 2 p.m. | *Virtual*
SON building room 535
on Baltimore campus

Outlook Calendar Invitation

We are seeking to build an innovative theory of medical symptoms beyond their biological causes to also use principles from psychology, sociology, anthropology, linguistics, sensation, perception, neuroscience, and other fields to better predict, prevent, and treat symptoms to allow people to live the lives they want to live.

All are welcome, including students, staff, faculty, scientists, clinicians, patients, etc.

Scan the QR code at right for more information.
